CREATE A CLEAN, PROFESSIONAL FINISH AT THE EAVE

EAVE CLOSER (FSEC)

The eave is one of the critical details on a standing seam install, and it's a visible one. General-purpose tools can scuff painted panels and leave an uneven hem, which means time spent fixing cosmetic issues instead of moving on. The Malco FSEC is our first dedicated eave closer, built for that final step: locking the hemmed panel onto the drip edge with a clean, consistent finish. An anti-scratch grip and replaceable jaw pads help protect painted panels along the way.

Product Features:

- Locks hemmed roofing panels onto the drip edge at the eave.
- 9” wide design handles painted steel up to 22 gauge.
- Anti-scratch molded grip: better hand control while forming, and helps protect painted panels when the tool is set down on the roof deck.
- Anti-scratch pads extend past the metal jaws, so the tool stays non marring however it sits on the roof deck.
- High-leverage final crease in fewer passes, helping reduce wave and ripple in the finished hem.

Specifications :

Jaw width	9"
Capacity	Painted steel up to 22 gauge
Replacement jaw pads	FSECRPJ
Weight (lbs.)	5.7
Tool Dimensions LxWxH	17.9”x 9.1” x 3.5”
